

■ Overview

This plug-in type universal temperature converter converts input signal (thermocouple, RTD or mV signal) into isolated DC voltage signal or DC current signal.

- Universal input enables selection of input type (thermocouple, RTD, mV signal) and of measuring ranges within specifications.
- DC voltage signal, DC current signal, communication output (RS485), or alarm output (2 relay contacts) is selectable as output-2.
- Change of input types / input ranges/burnout action, and I/O monitoring etc. can be done through Handy Terminal (JHT200).
- For the Fahrenheit display, specify the option "/DF".

■ Model and Suffix Codes

*1. When option code /C0 or /FB is specified, the conformity to the safety and EMC standards is excluded. CE marking is not applicable.

(Note 1) "/C0" option: Polyurethane coating. The "/C0" (HumiSeal coating) option does not guaranteed the coating effect though it is expected that the corrosion resistance for electric circuit is reinforced. And it is not able to submit coating test data.

(Note 2) "/FB" option: The primary power supply fuse is deleted, short circuit and ship it.

■ Standard Performance

Accuracy rating: ± 0.1 % of span.

However, the accuracy is not guaranteed for 0 to 400 °C of TC input (Type B) and output levels less than 0.5% of the span of a 0 to X mA (e.g. 0 to 20 mA) output range type. However, accuracy is limited in the following cases.

Thermocouple input:

When an input range is ± 25 mV or less in thermoelectromotive force conversion, ± 0.1 % of span or 10 μ V, whichever is greater.

When an input range is more than ± 25 mV and ± 100 mV or less in thermoelectromotive force conversion, ± 0.1 % of span or 40 μ V, whichever is greater.

mV input:

When the input range is ± 25 mV or less, ± 0.1 % of span or 10 μ V, whichever is greater

When an input range is more than ± 25 mV and ± 100 mV or less, ± 0.1 % of span or 40 μ V, whichever is greater.

RTD input:

± 0.1 % of span or ± 0.1 °C of span, whichever is greater (for Pt50, ± 0.1 % or ± 0.2 °C, whichever is greater.)

Reference Junction Compensation Accuracy:

Except for Type R, S;

± 1 °C (25 °C ± 15 °C)

± 2 °C (except for terminal temperature 25 °C ± 15 °C)

Type R, S;

± 2 °C (25 °C ± 15 °C)

± 4 °C (except for terminal temperature 25 °C ± 15 °C)

Reference junction compensation of Type B is not carried out.

- Alarm output: 350 ms (input change 10 to 90 %, alarm setting point 50 %, time till alarm output, when alarm delay setting and hysteresis are min.)

- If the software filter is on, add the following to the value above: Low: 100 ms, Middle: 300 ms, High: 1 s.

Burnout: UP, DOWN or OFF
